At this moment, my company follows the trend of doing blockchain. I'm in charge of the Backend - Frontend and support the team members.

- Blockchain Nut Token is a decentralized dex exchange, everyone can swap tokens with each other.
Frontend: React Js - React Hook - Redux Toolkit.
Backend: PHP - ElasticSearch.
=> Website: https://nut.money/

- Blockchain Favo Swap is a tool that helps token holders to promote their tokens through the swap function.
Frontend: React Js - React Hook - Redux Toolkit.
Backend: Node Js - Mongo DB.
=> Website: https://swap.favofi.com/

- Blockchain Favo Airdrop is a tool that helps token holders run an airdrop promotion for that token.
- **Frontend: React Js - React Hook - Redux Toolkit**
- **Backend: Node Js - Mongo DB.**
=> Website: https://favodrop.com/

- Blockchain FAVO Token is a website that can help traders see token information.
- **Frontend: Next Js - React Hook- Tailwind CSS.**
- **Backend: Node Js - Mongo DB.**

The company has 3 teams, each team has about 3-4 members. I was assigned the responsibility of leading a team of 3 members. My team is in charge of developing online advertising tools. My main task is to code and support the other 2 members to complete the assigned tasks. And my team mainly uses PHP - HTML - CSS - Bootstrap - JavaScript - jQuery skills.

-The tools my team developed :
- Website analytics tool.
- Keyword analysis tool.
- Block virtual clicks.
- Traffic tool..
- And there are some other tools.
